

IN THE CLAIMS

Please amend the claims as follows:

1. (original) A high-pressure discharge lamp comprising:
 - an outer envelope (1) in which a discharge vessel (11) is arranged around a longitudinal axis (22),
 - the discharge vessel (11) enclosing, in a gastight manner, a discharge space (13) provided with an ionizable filling,
 - the discharge vessel (11) having a first (2) and a second (3) mutually opposed neck-shaped portion through which a first (4) and a second (5) current-supply conductor, respectively, extend to a pair of electrodes (6, 7) arranged in the discharge space (13),
 - the outer envelope (1) having a bulb-shaped portion (2) adjacent the discharge space (13),
 - the bulb-shaped portion (2) having a wall thickness d₁,
 - the remainder of the outer envelope (1) having a wall thickness d₂,
 - the ratio of d₁ and d₂ being in a range of:

$$0.35 \leq \frac{d_1}{d_2} \leq 1.5$$

2. (original) A high-pressure discharge lamp as claimed in claim 1, characterized in that the ratio of d₁ and d₂ is in a range of:

$$0.4 \leq \frac{d_1}{d_2} \leq 0.8$$

3. (currently amended) A high-pressure discharge lamp as claimed in claim 1 ~~or~~², characterized in that the outer envelope (1) is made from quartz glass, hard glass or soft glass.

4. (original) A high-pressure discharge lamp as claimed in claim 3, characterized in that the bulb-shaped portion (2) of the outer envelope (1) is formed in a mold.

5. (currently amended) A high-pressure discharge lamp as claimed in claim 1 ~~or~~², characterized in that the discharge vessel has a quartz wall or a ceramic wall.

6. (currently amended) A high-pressure discharge lamp as claimed in claim 1~~—~~^{or}², characterized in that the ratio of the distance d_e between the electrodes (6, 7) to the height hdl of the high-pressure discharge lamp measured along the longitudinal axis (22) lies in a range of:

$$0.02 \leq \frac{d_e}{h_{dl}} \leq 0.2$$
